CodeWizardsHQ Completes Rebrand & Expands Curriculum to Serve Ages 8-18

[Austin, TX, October 15th, 2019] Jey Iyempandi, the founder of CodeWizardsHQ, announced today the company's curriculum redesign, complete rebranding, and the launch of their new website.

In 2015, CodeWizardsHQ became one of the first online education platforms focused on offering middle school students virtual, teacher-led, student-centered coding classes for kids. Their classes, once a single track for middle schoolers, have been expanded and divided into Elementary, Middle School, High School, and Advanced Placement Computer Science preparatory program providing a comprehensive curriculum for kids ages 8-18.

To provide a robust curriculum for kids ages 8-19, CodeWizardsHQ has focused on staying at the forefront of emerging technologies. Their expanded curriculum includes topics like AI, machine learning, natural language processing, and virtual reality. The program is now tailored by age group and full of engaging content that guarantees successful completion of projects and assignments!

Keeping students' future readiness in mind, CodeWizardsHQ finalizes their offering with a High School Internship Program experience that exercises initiative, creative problem-solving skills, teamwork, and leadership as students collaborate remotely to complete a programming project. The sequential and scaffolded learning processes offered from CodeWizardsJr to the Capstone HS Internship is one of a kind, a standout amongst coding classes for kids, being recognized as such through their five-star reviews!

As a result of their dedication to a quality product, they have upgraded their brand presence to represent the true CodeWizardsHQ. A company of today, not yesterday, trusted by parents, and loved by kids!
